

GENIE® INTRODUCES CLOSED CONFIRM™ GARAGE DOOR OPENER REMOTE

Mt. Hope, OH – The Genie Company, one of the most recognized brands in garage door openers, announces the introduction of the Closed Confirm™ remote, a next generation garage door opener remote that tells homeowners whether their garage door did or did not close.

“Genie’s Closed Confirm remote is the ideal accessory for our dealers to leverage with the installation of our new openers,” said Genie Brand Manager David Osso. “This innovative technology sends a signal to the opener remote, alerting the person leaving the home as to the status of the garage door. Sometimes people have to circle back because they can’t remember if they shut their door. This can help add peace of mind to a busy person’s life.”

Here’s how it works: Once the garage door closes, the Closed Confirm remote will beep and flash a green light if the garage door shuts properly. If the door instead reverses open, a warning tone will sound and a red light will flash, giving the person the opportunity to investigate the reversal.

The Closed Confirm remote operates on 915 MHz frequency and communicates with up to three garage door openers via Genie’s Network Adapter, which plugs into the opener. The remote features a visor clip for convenient placement.

Closed Confirm remotes work exclusively with Genie’s new TriloG™, IntelliG™, PowerMax™, SilentMax™, and ChainMax™ garage door openers which feature extremely powerful 140 volt DC motors. This design provides the best of both worlds, including the quietness of DC and the strength of AC. The Genie motors have enough power to smoothly and efficiently lift even the heaviest garage doors. Designed with safety and convenience in mind, both openers feature a bright lighting system with up to a maximum two 100-watt bulb capacity, while select models feature a motion-detection system that activates the lights in the garage for security and convenience.

The TriloG, IntelliG, PowerMax, SilentMax, and ChainMax openers incorporate Genie’s innovative GenieSense™ monitoring and diagnostic technology, which delivers the power needed at every movement of the garage door and continuously monitors door operation and stopping it when significant changes occur. These features minimize noise, wear and tear on the door and can improve overall safety. The openers offer homeowners a variety of accessory options and are compatible with HomeLink® and Car2U® in-car universal remote systems.
