Product Series: Opener Heads  
To: All Genie Professional Line Wholesalers, Dealers and Installers  
Re: Addition of a Mechanical Brake to the IntelliG® Opener

---

IntelliG chain and belt drive openers have been upgraded with an internal mechanical brake. The mechanical brake automatically holds the door in position when the motor is turned off. This brake will assist in holding the open position limit where installations are unusually heavy in the open position. The brake also improves the normal operation of heavy three section wood doors and other unusually difficult door balance conditions.

This enhancement took effect early December 2012. All IntelliG chain and belt drive openers labeled with serial numbers later than 123394110002 feature the new mechanical brake.
