Product Family: Residential Opener Accessories
Product Series: Accessories (Aladdin Connect®)
To: All Genie Professional Line Wholesalers, Dealers, and Installers
Re: New Feature Launch – Integration with Jervis Systems, an access management platform that allows users to connect and manage multiple access devices using one app.

The Genie® Company is pleased to announce that the Aladdin Connect® smart garage door openers and controllers are now integrated with Jervis Systems, an access control platform designed to manage multiple access devices on multiple properties using one app. The Jervis Systems platform provides a unified residential access management solution for both smart locks and garage door openers, enabling property managers and short-term rental owners to provide a secure solution that automates access, simplifies check-in and checkout, and makes it simple to manage access to multiple properties.

Key benefits of working with Jervis Systems:

- **Smart Device Integration** – Jervis works with smart door locks from Yale, Schlage, August, and Master Lock, and garage door openers from Genie and Overhead Door™ brand, providing a unified interface across all brands.
- **Simplified Access Management** – Enables property managers or short-term rental hosts to quickly provide access to tenants or maintenance staff and monitor who has accessed each property, eliminating the need to share keys or rekey the property.
- **Ease of Use** – Jervis Systems has a solution that fits every end user. Tech savvy users can download the mobile app, and those that are little less savvy can use a patent-pending call or text-to-open capability.
- **Unified Remote Control** – Remote operation is available via the mobile app for iOS/Android, the browser-based dashboard, or via text or call. All devices, both door locks and garage door openers can be remotely operated in the same way.

If you have any questions, please check out the Jervis Systems website for more information.
