Date: October 19, 2011
Number: 3147
Division: Genie®
Product Family: Residential Openers
Product Series: IntelliG™ & TriloG™ Openers
To: All Genie Professional Line Wholesalers, Dealers and Installers
Re: Programming Intellicode® 1 Accessories to Openers with Intellicode 2 technology (IntelliG & TriloG Openers)

When programming Intellicode 1 accessories to IntelliG & Trilog openers (which possess Intellicode 2 technology), you previously had to use an Intellicode 2 remote first to 'open the window' for the unit to accept the Intellicode 1 accessory.

Going forward, the Intellicode 2 remote is no longer required to be used first before the Intellicode 1 accessory can be programmed. As a rolling change, the Intellicode 1 accessory can go through the traditional programming procedure without the use of the Intellicode 2 remote. If you or your installers / customers have already committed the procedure with the Intellicode 2 remote to memory, this application still works, however, is no longer a required step.

The serial numbers below identify the start date at which this software change went into effect for each product:

Chain/Belt: SN111894210874 (7/8/11)
DC Screw: SN111894110007 (7/8/11)
AC Screw: SN111964210988 (7/15/11)
