Re: Enhancement to Safe-T-Beam System

The standard photo eyes inside all current residential operators have undergone an enhancement to resolve nuisance reversals caused by light infiltration issues.

Previous Design:

The previous photo eye beam had a shorter, wider lens area and was more susceptible to light infiltration issues.

New Design:

The new photo eyes have a lengthened tube and narrowed beam opening while still maintaining ease of alignment.

Models 2568, 3064, 4064, 3024 and 4024 with serial number pre-fixes 15357 and greater will contain the enhanced eyes. Models 1028 and 2028 with serial numbers as early as 15336 could contain the enhanced eyes. Photo eye sets in accessory cartons (PN 37220R) began in January of 2016.
