**To:** All Genie Professional Line Wholesalers, Dealers and Installers  
**Re:** New Product Launch – Wall Mount Power Extension Kit

---

The Genie Company is excited to offer the new Power Extension Kit for Genie Professional Line Wall Mount Openers. This kit is perfect for applications without a 115 VAC outlet within 5' of the opener at the time of install. Best of all, it does not require an electrician to install an outlet. A technician can complete the opener installation with the Power Extension Kit without having to reschedule after an electrician has installed an outlet near the opener.

The Power Extension Kit will replace the transformer and power cord in the chassis with a low voltage power supply board and cable leading to a low voltage power supply box and standard 4' power cord with 3-prong plug that can be plugged into the nearest standard outlet. The low voltage cable provides up to 30' of additional cord which can be cut to desired length for a clean look.

Made exclusively for Genie Wall Mount Openers, the Power Extension kit can be used on Models 6070H and 6070H-B or Models 6170H and 6170H-B, both featuring Aladdin Connect®. Additionally, this kit has been designed to provide the same full power and functionality as the standard transformer provides to the opener.

Available NOW!
