Re: ReliaG® 600 (1024) Board / Electronics Upgrade

The control board assembly has changed for ReliaG 600 units. This change takes effect in units beginning with a serial number of 0801004 and a date code of 041217 and higher. The serial number can be found on the opener head. The date code can be found on the outer carton next to the model number and barcode (shown below).

The new control board assemblies now accept the Series II wall console and houses 1 light bulb up to 60W maximum. An orange dot label will be applied to the control board and the outside of the box to indicate the update.

Going forward, when 36448A.S is required, part number 37028E.S should be ordered. The original board part number 36448A.S will be available while supplies last for service part and warranty use. The ReliaG 600 will continue to come standard with a basic Wall Button Assembly.
