Re: Emergency Release Attachment

Tips for the Connection of the Emergency Release Kit to the ReliaG 600 & 800 Units

The S-hook normally is used to connect the cable into the same hole as the red release rope. However, in this case, the S-hook is removed from the cable and connected directly to the aluminum arm as shown in both figures above.

- Obtain standard emergency release kit and remove S Hook from the cable end that attaches to the opener carriage
- Attach the emergency release cable loop end to the opener carriage as shown above
- Follow the remaining installation instructions for the standard emergency release kit
- Emergency Release Kit
