Re: One Solution for the Residential Opener and the Gate Operator System

The Genie Company has a solution to control a gate operator system and residential garage door opener from a single remote!

The GenieMaster™ remote will work with rolling (Intellicode®) and fixed code technologies. Any of the 3 buttons can be programmed to any of the following configurations:

- Fixed Code, 9 Switches, Binary
- Fixed Code, 9 Switch, Trinary
- Fixed Code, 12 Switch, Binary
- Intellicode (315/390 MHz)

Works with Genie external gate receiver !

To ensure that the gate operator system on site can handle an unlimited number of Genie remotes, it is recommended to use the Genie/Horton external fixed code receiver part number 34564R along with a coax and connector kit, part number 108035.0001.S.

The Genie/Horton external fixed code receiver operates on a 390 Mhz, has 9-Switches, and is a trinary fixed code - meaning each of those 9 dip switches in the receiver can be set up, down, or in the middle. On the 3-button GenieMaster® remote, you can set the dip switches inside to match those same 9 positions and therefore make it compatible with the receiver.

On the front of the GenieMaster remote, each of the buttons can be programmed to transmit either fixed code OR Intellicode - the perfect transmitter to use if you have a gate operator with a fixed code receiver, and a Genie garage door operator that is Intellicode.

Please refer to the GenieMaster instructions for the remote's simple programming process. The instructions with the receiver will address the connection to the gate operator.

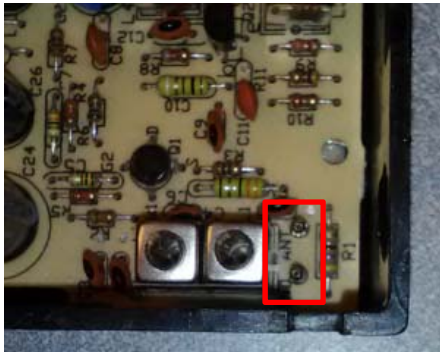

Description:
GenieMaster Remote
Part Number: 37344R
Model: GM3T-BX

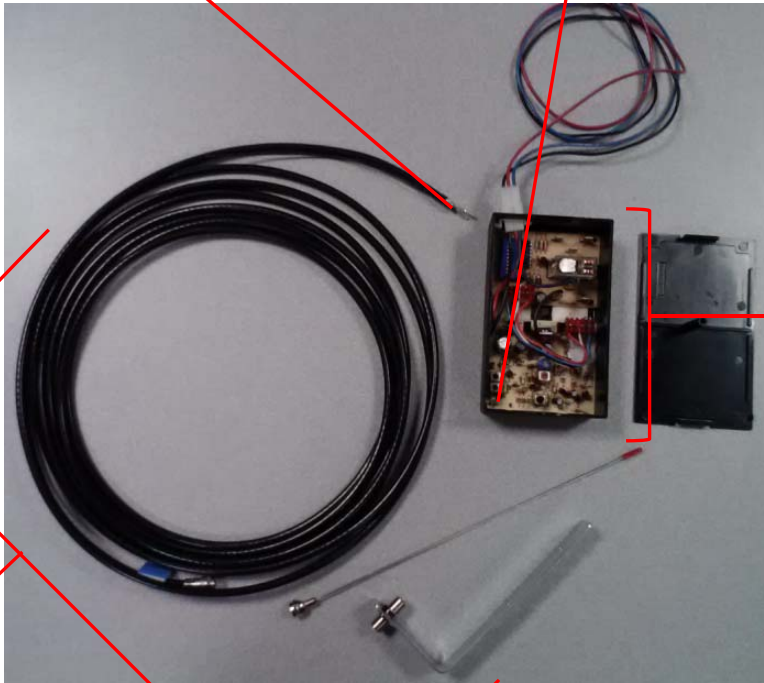

To install the coax cable to the receiver, consult the instructions packaged with the coax cable (PN 108035.0001.S).
